

Analyse Data with **PowerBI Professional**

This course is designed for anyone working with a large amount of data who is wishing to analyse it and create eye catching visualisations. The course takes participants through the basics of visualisations and DAX measure and introduces data modelling skills, the DAX Expression language and looks at methods of creating more flexible business intelligence.

Participants will get hands-on experience learning key skills and concepts using example data based on real world scenarios.

The student should be familiar with Excel and the concepts of datasets and basic reporting. Please note that this course is not suitable for inexperienced Excel or database users.
